WHAT IS PYTHON ?

Python is a high level interpreted programming language that is widely used for the general purpose programming. it was created by Guido Van Rossum and first released in 1991.

FEATURES OF PYTHON

- Simple and readable - Easier to learn
- Highly Interpreted - No need to compile
- Cross platform - Runs on windows, macOS and many other platforms
- Open source - Free to use
- Object oriented and functional - Supports multi programming

WHAT PYTHON IS USED FOR

- *Web development
- *Data science and machine learning
- *automation/scripting
- *game development
- *desktop applications
- *cybersecurity and ethical hacking

DATA TYPES

Int - Integer

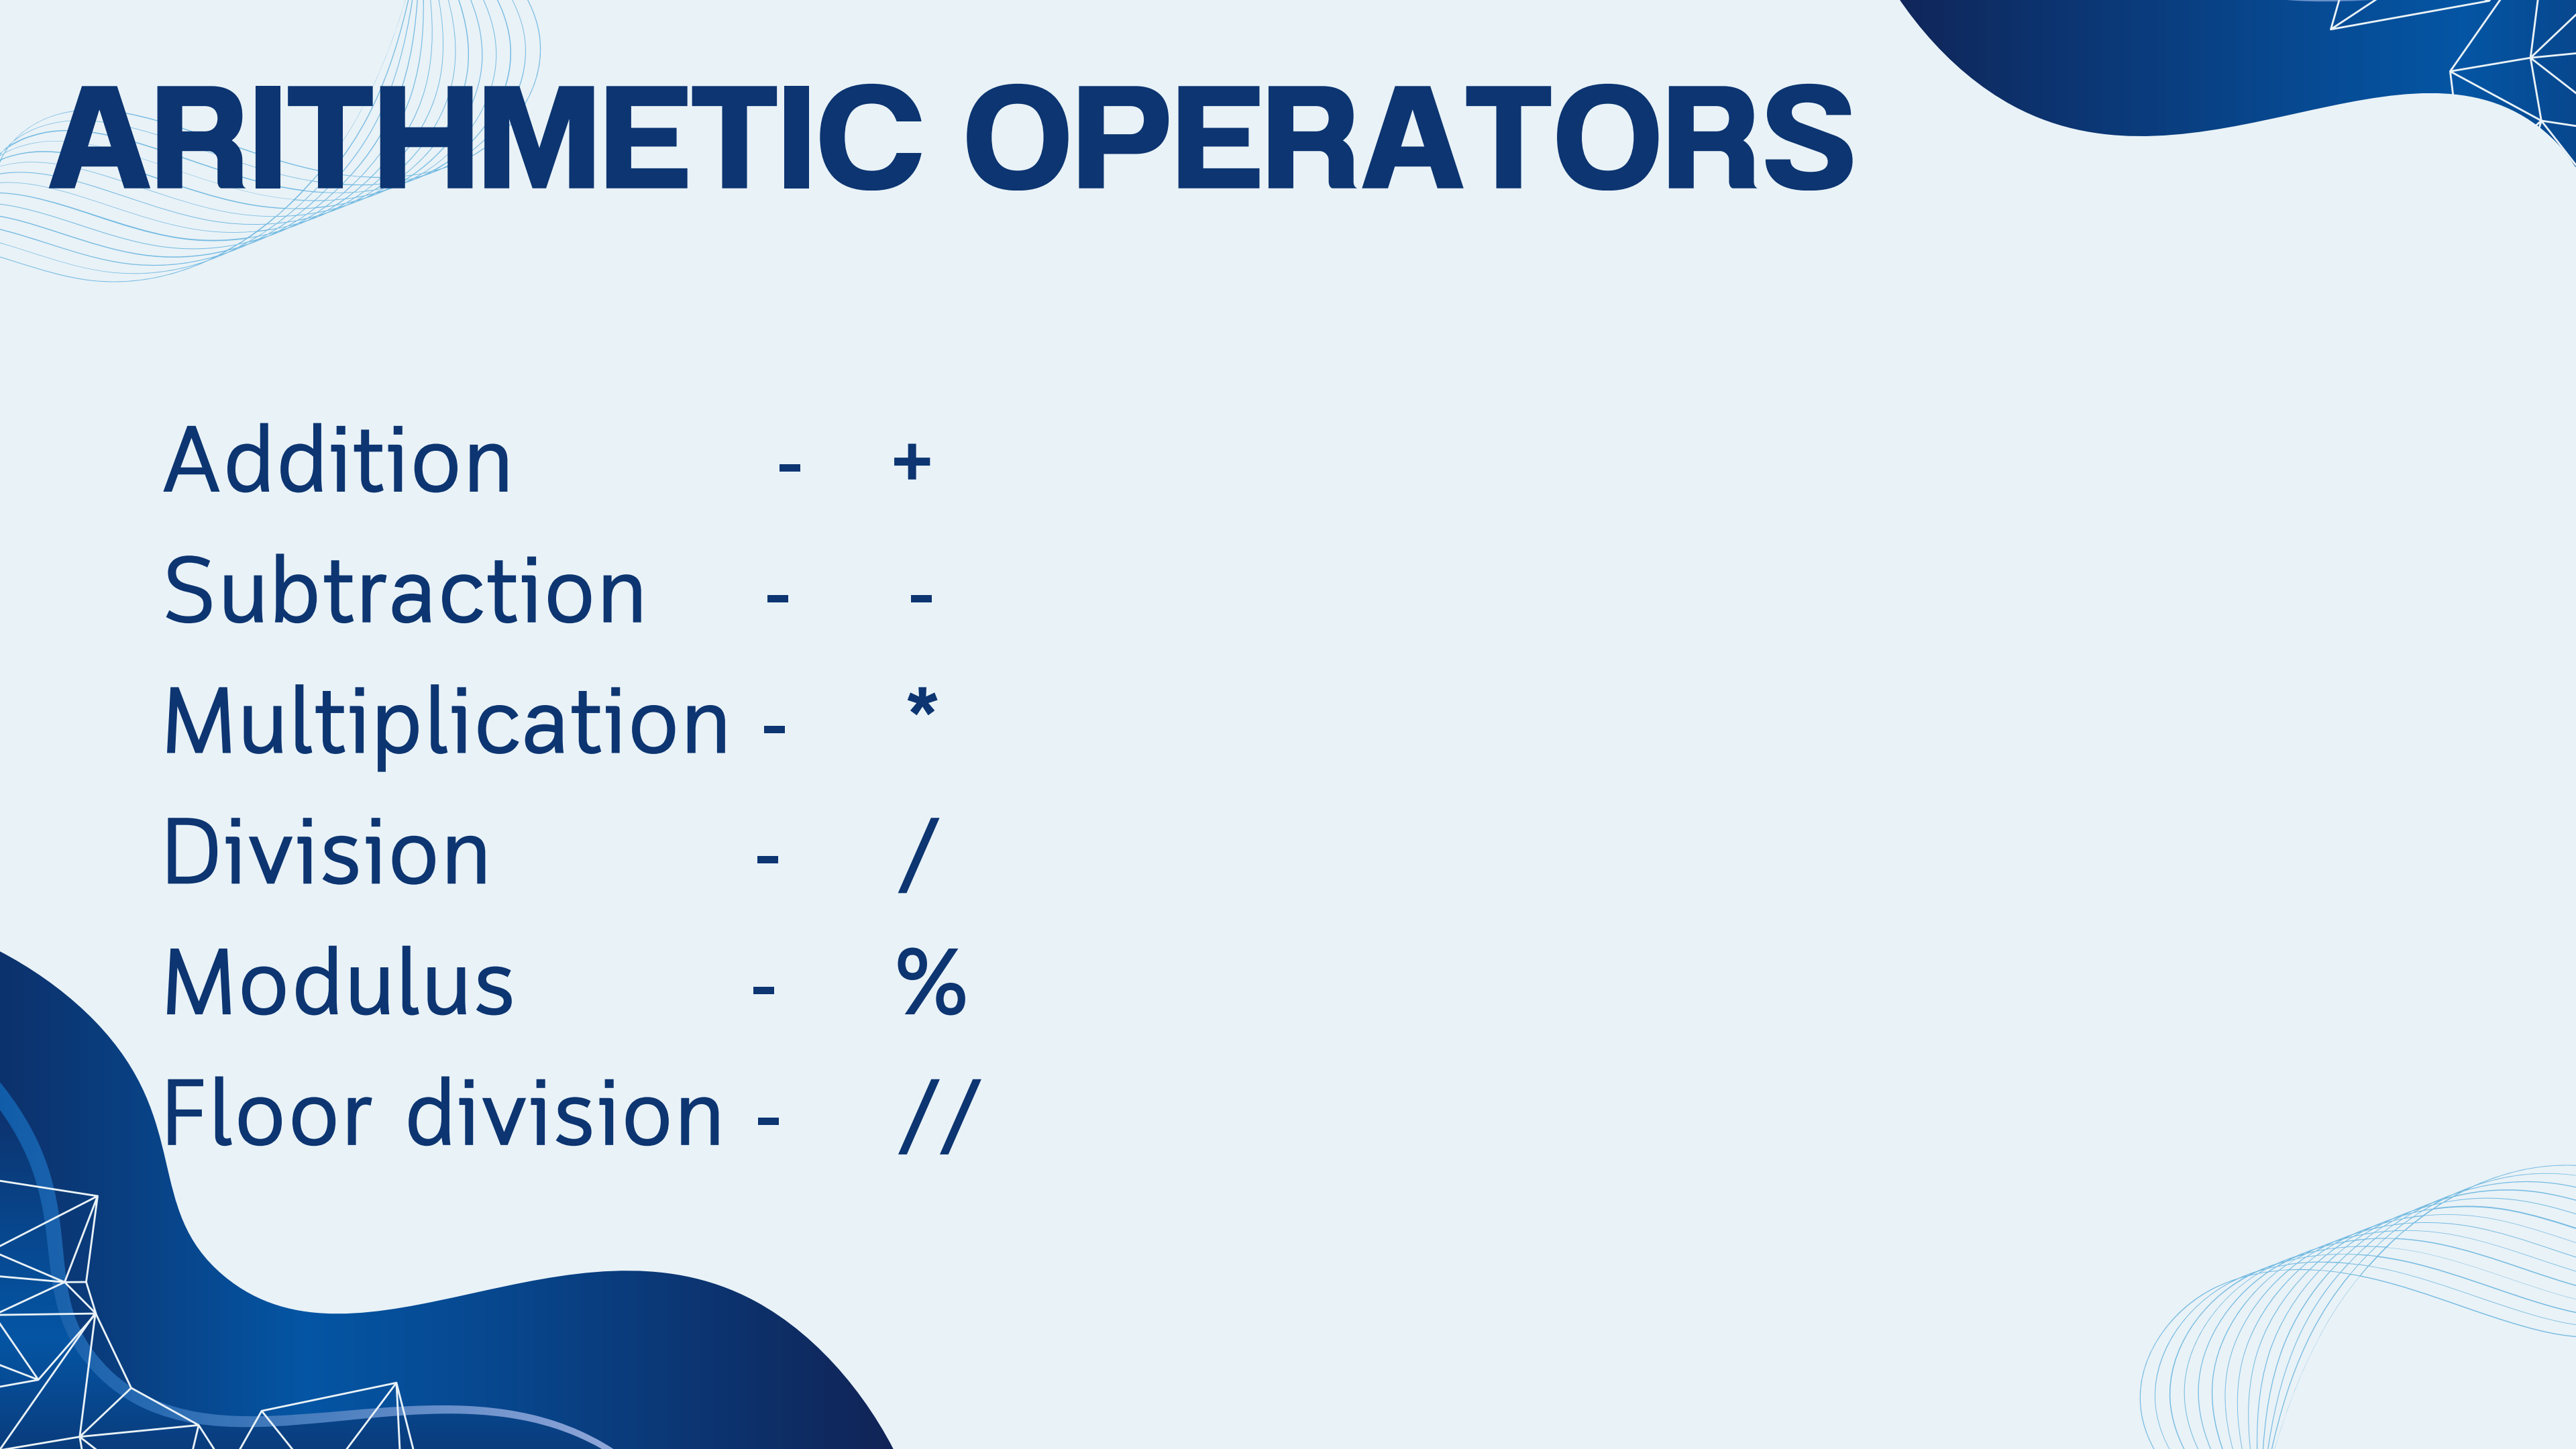

Float - Decimal/Numbers

Str - String

Bool - Boolean values

OPERATORS IN PYTHON

- *Arithmetic operators
- *comparison operators
- *Logical Operatos

ARITHMETIC OPERATORS

Addition	-	+
Subtraction	-	-
Multiplication	-	*
Division	-	/
Modulus	-	%
Floor division	-	//

LOGICAL OPERATORS

- And - True if both are true
- Or - True if atleast one is true
- Not - Reverse the result

COMPARISON OPERATOR

== - Equal to

!= - Not equal to

> - Greater than

< - Less than

>= - Greater or equal

<= - Less or equal

ADVANTAGES OF PYTHON

- *beginner friendly
- *huge library support
- *high demand in job market
- *rapid development speed

CONCLUSION

Python is a powerful ,flexible and easy to learn language.it plays a huge role in data science,ai and web development.it is a great choice for beginners as well as professionals.

The slide features a light blue background with abstract blue geometric shapes and lines in the corners. In the top-left corner, there are several thin, curved lines. In the top-right corner, there is a thick, dark blue shape with a white geometric pattern. In the bottom-left corner, there is a thick, dark blue shape with a white geometric pattern. In the bottom-right corner, there are several thin, curved lines.

THANK YOU
